

# Coated in Nylon by Omnikote

...or just  
powder coated?

## Specify **Omnikote Nylon** coating

A short while into your vehicle's service, polyester powder coated handpoles can start to wear, spoiling the appearance of your bus interior.

Independent tests show that **Omnikote's nylon** coated poles can last 10 times longer, saving you the expense and inconvenience of stripping and recoating the poles.

Join the discerning circle of bus operators such as K.M.B. (whose Hong Kong buses are possibly the hardest worked in the world) who specify **Omnikote Nylon** coated handpoles when commissioning new vehicles and keep your interiors looking good.

Omnikote are so confident in our Nylon coating, that if specified for a new vehicle, or we refurbish your existing poles into Nylon we will **guarantee the coating for as long as you run the bus.**

### How do you know if your handpoles are Nylon or Polyester?

Contact us and we will send you more information and a free test kit - 01296 483266
